The birth of a renewed interest in measuring and evaluating what we all do in global health (including the role of journals) is most welcome. It signifies our joint commitment to ensuring that the promises we all make are fully delivered. The most advanced expression of this interest in accountability has come from the UN Commission on Information and Accountability for Women's and Children's Health, a creature of the UN Secretary-General's Every Woman, Every Child initiative. What the work of the Commission and its offspring, the independent Expert Review Group, shows is that while monitoring and metrics are important, they are only the beginning of the process we call accountability. Two further steps—participatory, transparent, and inclusive review of data, together with a plan for action based on that review—are essential additional components of accountability...."</p>
2.	<p><b>Policymakers' and other stakeholders' perceptions of key considerations for health system decisions and the presentation of evidence to inform those considerations: an international survey</b></p> <p>Joshua P Vogel 1,2, Andrew D Oxman<sup>3</sup>, Claire Glenton<sup>3</sup>, Sarah Rosenbaum<sup>3</sup>, Simon Lewin<sup>3,4</sup>, A Metin Gülmezoglu<sup>2</sup>, João Paulo Souza<sup>2</sup></p> <p>1 School of Population Health, Faculty of Medicine, Dentistry and Health Sciences, University of Western Australia</p> <p>2 UNDP/UNFPA/UNICEF/WHO/World Bank Special Programme of Research, Development and Research Training in Human Reproduction (HRP) Department of Reproductive Health and Research, World Health Organization, Geneva, Switzerland</p> <p>3 Global Health Unit, Norwegian Knowledge Centre for the Health Services, Oslo, Norway</p> <p>4 Health Systems Research Unit, Medical Research Council of South Africa, Cape Town, South Africa</p> <p><b>Health Research Policy and Systems 2013, 11:19 doi:10.1186/1478-4505-11-19 – May 24, 2013</b></p> <p>Available online at: <a href="http://bit.ly/118o1Gg">http://bit.ly/118o1Gg</a></p> <p>The DECIDE framework was developed to support evidence-informed health system decisions</p>

through evidence summaries tailored to health policymakers. The objective of this study was to determine policymakers' perceptions regarding the criteria in the DECIDE framework and how best to summarise and present evidence to support health system decisions.

#### Methods

We conducted an online survey of a diverse group of stakeholders with health system decision experience from 15 countries and the World Health Organization. We asked about perceptions of: criteria relevant to making health system decisions, use of evidence, grading systems and evidence summaries.

#### Results

We received 112 responses (70% response rate). Most respondents had healthcare (85%) and research (79%) experience. They (99%) indicated that systematic consideration of the available evidence would help to improve health system decision-making processes and supported the use of evidence from other countries (94%) and grading systems (81%).

All ten criteria in the DECIDE framework were rated as important in decisions. Respondents had divergent views regarding whether the same (38%) or different (45%) grading systems should be used across different types of health decisions. All components of our evidence summary were rated as important by over 90% of respondents.

#### Conclusions

Survey respondents were supportive of the DECIDE framework for health system decisions and the use of succinct summaries of the estimated size of effects and the quality of evidence. It is uncertain whether the findings of this survey represent the views of policymakers with little or no healthcare and research..."

*".....The criteria included in the framework are: seriousness of the problem, number of people affected, quality of the evidence, size of the benefits, size of the adverse effects, resource use (costs), value for money, impacts on equity, implementability (feasibility) and acceptability....."*
