Introduction of the levonorgestrel intrauterine system in Kenya through mobile outreach: review of service statistics and provider perspectives

Limited introduction of the LNG IUS through mobile outreach in Kenya, without any special promotion, resulted in good uptake. And providers viewed it positively, particularly because of its noncontraceptive benefits. Increased provision of the LNG IUS can improve options for women needing highly effective reversible contraception.

Moving malaria in pregnancy programs from neglect to priority: experience from Malawi, Senegal, and Zambia

Program areas that were generally working well in malaria in pregnancy programs (MIP) included: (1) integration of MIP interventions into antenatal care; (2) development of up-to-date policies; (3) active involvement of communities; and (4) development of capacity-building materials for training. Challenges remain in the areas of: (1) commodities; (2) quality assurance; (3) monitoring and evaluation; and (4) financing.

Scaling up delivery of contraceptive implants in sub-Saharan Africa: operational experiences of Marie Stopes International

Between 2008 and 2012, Marie Stopes International (MSI) provided 1.7 million contraceptive implants in sub-Saharan Africa as part of a comprehensive method mix, primarily through mobile outreach using dedicated MSI providers and also through social franchising and MSI-run clinics. Large-scale access, quality, and informed choice were key elements of MSI's strategy.

Safety of adult medical male circumcision performed by non-physician clinicians in Kenya: a prospective cohort study

Trained, experienced nurses and clinical officers provided safe voluntary medical male circumcision (VMMC) in public health facilities in Nyanza Province, Kenya, as evidenced by the low 2% adverse event rate (most commonly, excess swelling). Task shifting for male circumcision can improve access to quality VMMC services.
